Att: Peter Holt

Dear Peter,

We were at first sceptical of your magnetic fuel conditioning devices. Our cranes have always been meticulously maintained and serviced. Our cranes run and idle for extensive periods of time and we are very careful in ensuring that our engines are in excellent working condition. Given that the science behind them was sound, we decided to give them a try.

Upon installation of the devices, our operators reported that the cranes had a reduction in exhaust smoke and more importantly, there was a marginal increase in power, especially travelling through the gradient areas of the Adelaide Hills region.

From regular servicing, we have noticed that the fuel filters are not as soiled at each service and we have had less trouble with our fuel pumps.

Overall, we have been impressed with the investment we made in your magnetic fuel units and would recommend their use in any diesel engine, as we believe they are beneficial to the long life of our machines.

Thank you

Tim Mildren
Barossa Valley Crane Hire
